

The household step-ladder balances the housewife with formica-topped desk is an impressive whole made of simple parts.

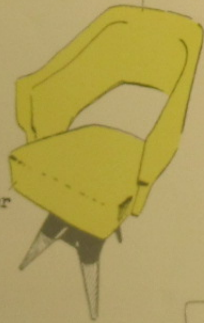

lidded drawer

formica top

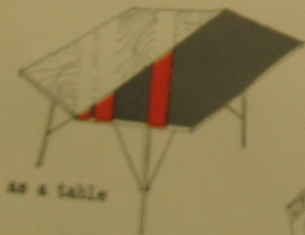

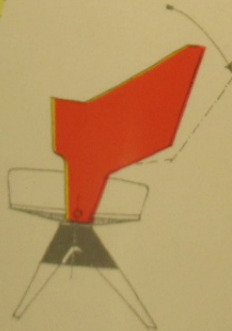

Yosuchi's ideas for furniture could be carried out in two ways: 1. in the elegant execution indicated by his drawings, requiring an artisan with some degree of skill; or, 2. by the week-end craftsman. The point lies in assembling simple parts, and by-passing the most difficult operations of professional furniture joining. Note, however, that the plywood cut-outs frequently used for table and chair legs, case tops, chair backs, etc. are easy to use but never look crude.

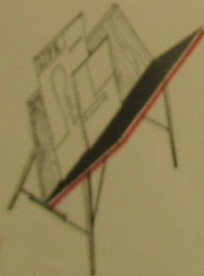

plastic-coated upholstery

foam rubber

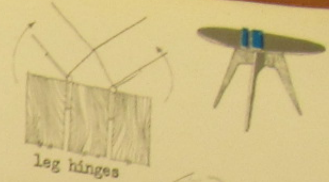

as a table

as a magazine rack

The swivel chair achieves postural flexibility with an exposed screw joint. The secret of the dual-purpose table lies in the simple though ingenious action of the braces.

Trios of wood-hinged legs support long or little tables. Reinforcement of the plywood-backed chair and unfolding of the two sofa-beds are self explanatory, but quite original.

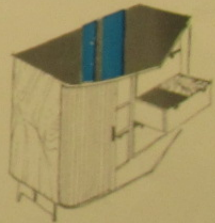

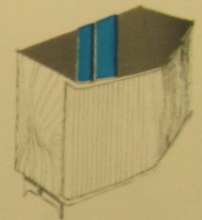

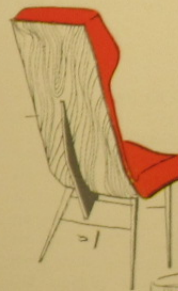

leg hinges

two mounts and a top  
make a big table

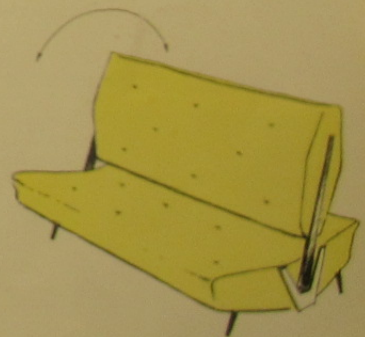

foam rubber

split mattress

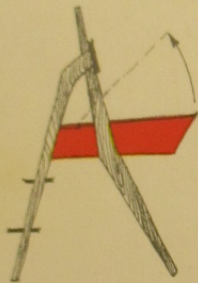

wooden headboard

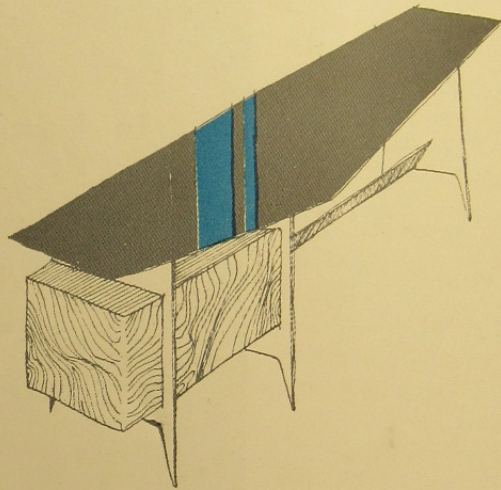

The household step-ladder balances the housewife with a useful storage unit. The formica-topped desk is an impressive whole made of simple parts.
